What Is Cosmos?

Cosmos is an **AI-powered instructional assistant** built directly into the Penda Learning student platform. Designed to advance learning and reduce frustration, Cosmos provides students with timely, structured academic support when they get stuck, without giving them answers.

Cosmos uses pre-set prompts with customized responses to ensure students remain safe, focused and engaged in learning.

How Cosmos Helps:

Time-Saving for Teachers:

Cosmos handles routine clarification questions so teachers can focus on deeper instruction, small-group work, and introducing new concepts.

On-Demand Support:

Help arrives exactly when and where students need it, reducing downtime and increasing engagement.

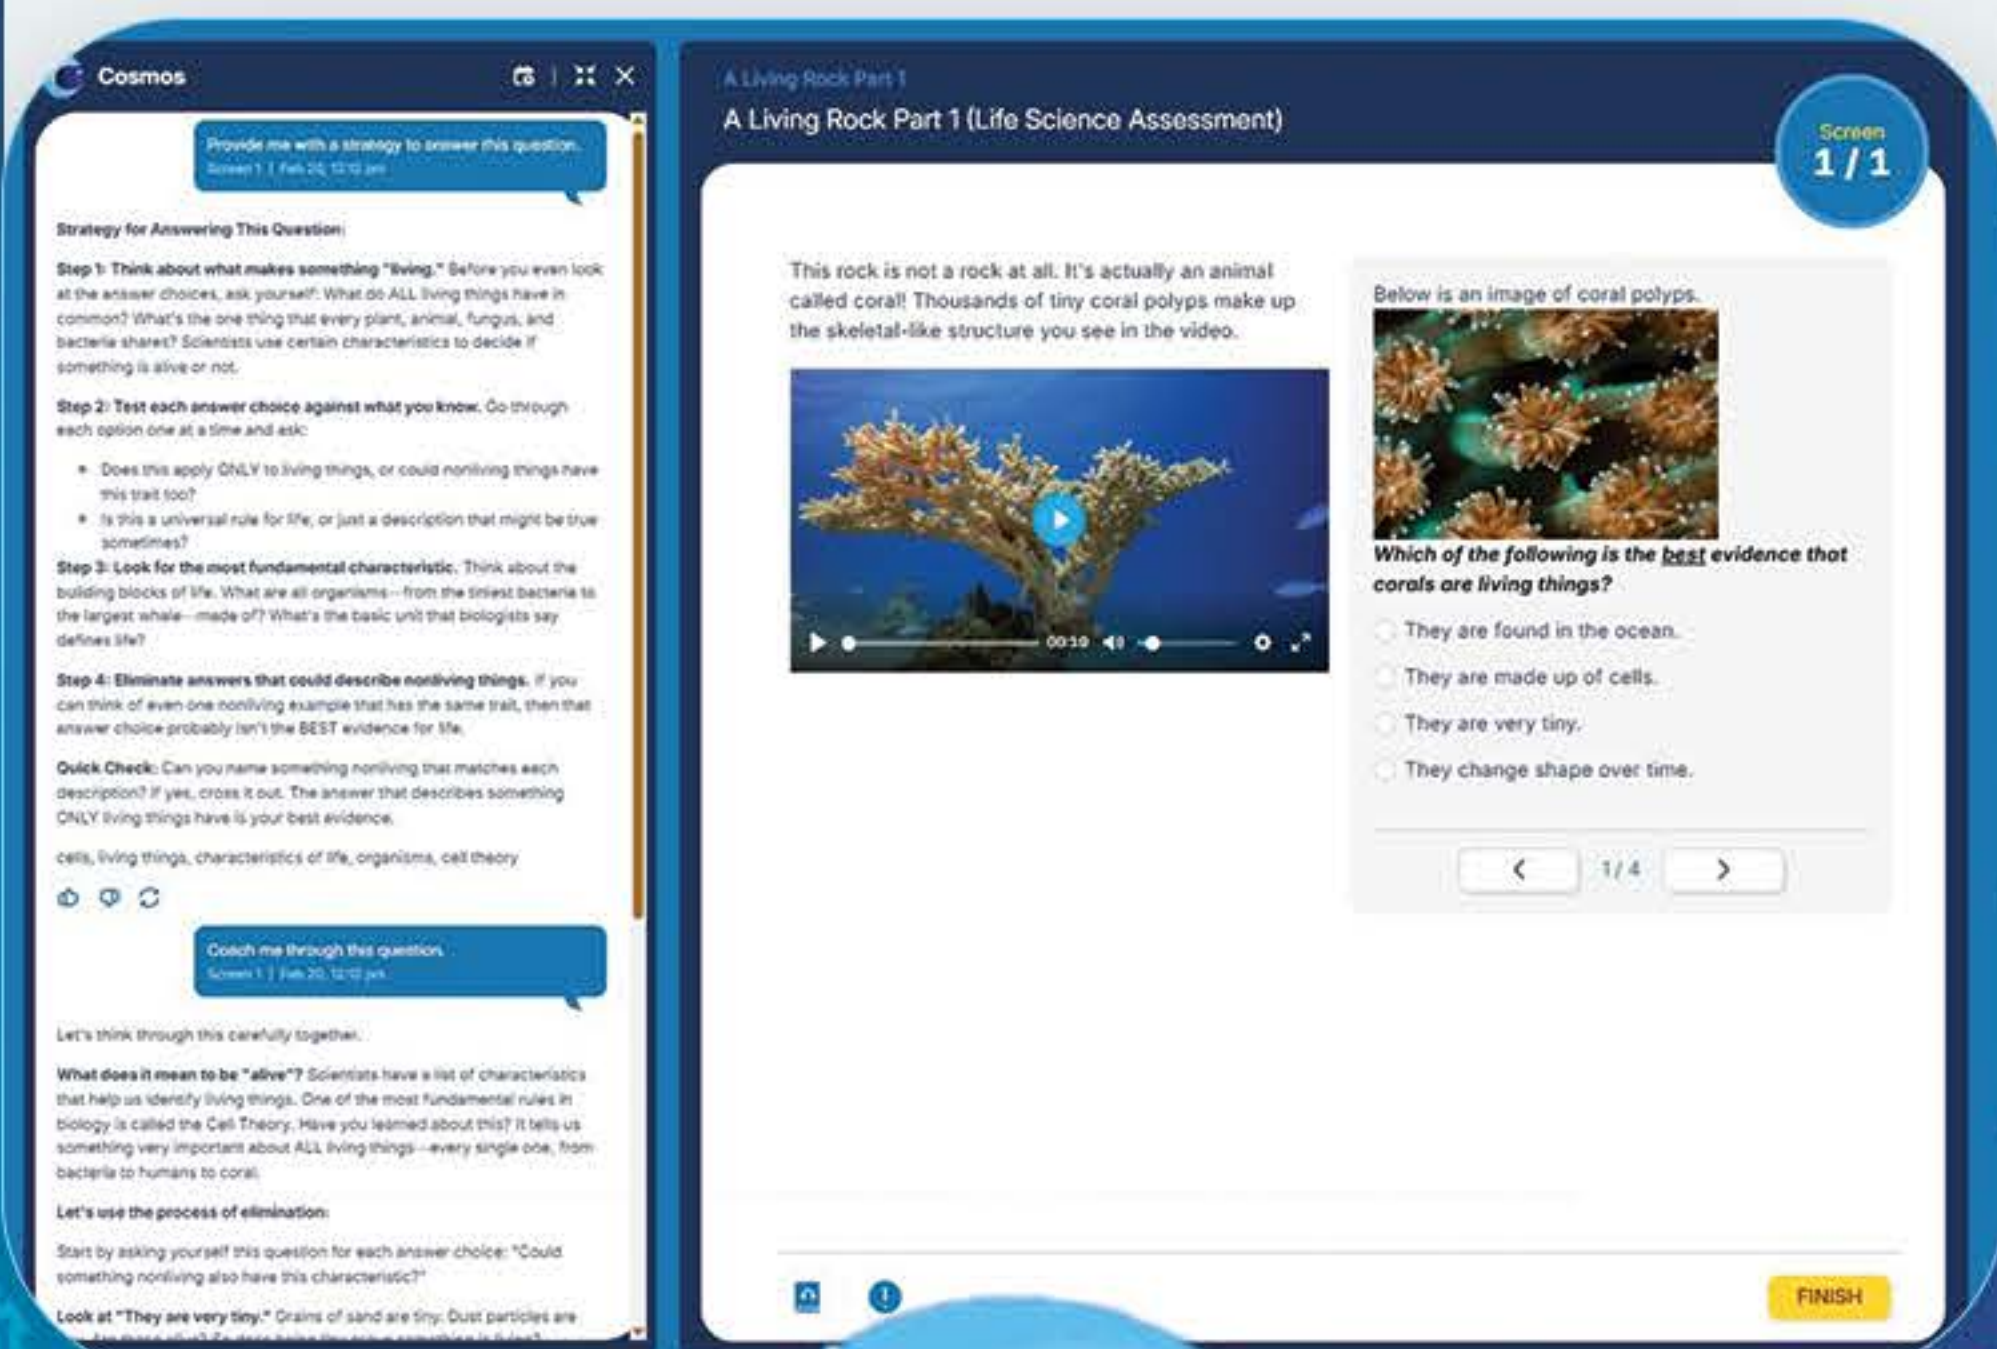

Translation & Read-Aloud:

Students who need read-aloud or language translation support will continue to receive it through Cosmos.

Confidence Builder:

Scaffolded guidance empowers students to take ownership of their learning and continue progressing independently.

Built with Student Privacy and Safety in Mind

Cosmos is designed specifically for K-12 science student support and adheres to Penda's AI and data privacy policies and commitments. District leaders maintain control of the Cosmos feature and can adjust settings as needed.
